

SPECIALISTS IN NON-DESTRUCTIVE EXCAVATION OF SENSITIVE ASSETS

SAFE. PRECISE. EFFICIENT.

THE SUSTAINABLE CHOICE

- ✓ Waterless excavation.
- ✓ 100% of materials reusable immediately.
- ✓ Clean, quiet and unobtrusive on every site.
- ✓ Less downtime, more productivity.

WHAT MAKES US DIFFERENT FROM OTHERS?

Zero Water. Zero Waste.

Our dry vacuum excavation method requires no water, eliminating the mess and environmental impact of hydro excavation. No muddy slurry. No drying time. Just clean, precise excavation.

Safe, Clean, Unobtrusive Work Sites

Our advanced trucks operate quietly and leave the site clean and dry, reducing public disruption and keeping workspaces safe. Ideal for high-traffic or sensitive environments where cleanliness and a minimal footprint matter.

Immediate Reuse of Materials

Excavated materials remain dry, clean, and reusable - allowing them to be side-tipped back into the original location or repurposed elsewhere without the need for additional processing or drying. This saves time, reducing costs and conserving environmental resources.

Safer for Infrastructure and People

Non-destructive digging protects underground assets and reduces the risk of injury. With no dust or slurry, it improves visibility and enhances health and safety for site workers and the public.

Powered by Precision Engineering

Built in Germany, our trucks represent the latest in dry vac technology. They're engineered for maximum efficiency, minimal emissions and superior performance in every environment.

Machine Capabilities

- » 6m³ debris bin
- » 250mm diameter hydraulic boom suction system
- » Remote control operations
- » Deep excavations
- » Removes soil, gravel, mud, rail ballast, water and solid materials.

Dig Smarter. Cleaner. Faster.

Say goodbye to water waste, mud and delays. Dry Vac X delivers cutting-edge dry vacuum excavation, setting a new standard for efficient, eco-conscious and hassle-free digging.

When you choose Dry Vac X, you're backed by CATS Construction and its group of specialised companies, who work together to deliver innovative, high-quality solutions for every project.
